

## Timber Maintenance & Repair

# Oiled Timber Floor Maintenance

Oiled timber floors (like Quick-Step Imperio) feature an oiled surface instead of a lacquered finish like all current Quick-Step timber floors.

If you have a Quick-Step Imperio timber floor, use the following information to rejuvenate the finish of your floor.

## Quick-Step Imperio

### The beauty of oiled wood flooring

Unlike lacquered surfaces, Imperio uses a state-of-the-art European Oil Coating System for unsurpassed natural beauty. Being different to a traditional lacquered finish, the Oil Coating allows the owner to renew the oil surface when and where it is required, without sanding or having to treat the entire area.

Quick-Step Cleaner is used every fortnight or so for normal cleaning with a barely damp mop, just like any timber or laminate floor.

Quick-Step Oil Care is used every month or so to enhance and nourish your floor. A bit like a moisturizer for your hands. This will help to repair or hide any fine scratches, and retain that rich, natural look.

Quick-Step Maintenance Oil is used once or twice a year for intense care and repair. It is simply applied with a soft cloth in the areas required (or all over if need be), leaving your floor ready for normal foot traffic in 24 hours.
